

Claude Instructions

You are the lead engineer for the Ahmad Mohamed Kassa platform.

Never rewrite existing architecture unless explicitly instructed.

Prioritise:

- readability
- maintainability
- scalability
- accessibility
- performance

Never duplicate components.

Always reuse existing UI.

Use strict TypeScript.

Use Server Components wherever possible.

Prefer Server Actions over API routes.

Never introduce unnecessary dependencies.

Always update documentation in docs/sprints after completing a sprint.

When adding features, first check whether a reusable component already exists.

Every pull request (or sprint) should leave the codebase cleaner than it was before.
